Own contributions assessment

Overall, I am happy with the progress that I made in the assignment. It did not come without its own set of issues, but I am proud to stand behind my work. I feel like I gained a deeper understanding of the different moving parts that go within a project, project, and time management (even when one has to do it alone, perhaps even more importantly so) and of course specific development wins I had.

My work was divided as follows:

Monday: I made my Trello board and listed out all the different components that would be needed in the project, made my folder structure, gained a deeper understanding of the flow of the design. Unfortunately also realized that I have a huge problem with the API on my local environment

Tuesday: Spent the day discussing and trying different solutions with both Heinz and one of my classmates. After a whole day of installing and uninstalling programs and files, I was able to gain access to the data late in the afternoon.

Wednesday: Worked on the home page, header, hero element, newest events card, footer and responsiveness.

Thursday: Fetched the data for the all actors and all events pages and styled + responsiveness.

Friday: All the details pages, routing and styling

Saturday (extra day because of backend issues): Login page (not without its own backend issues that I'd like to discuss further), comments, lighthouse check and rapport

Technologies used:
- React
- Sass
- Axios
- React-router-dom
- React-icons for footer icons

Specific code elements to discuss

In my presentation I'd like to discuss my EventDetails page since I believe it is a good example of the well structured and easily understandable code I strive for in my journey as a developer

Highlighting points for assessment

I would also like to show my NavBar component because it is a very react-forward way of handling the different states according to screen size and with a bit of styling it works as intended.

Appendix: Timetable and Lighthouse check

Here my work process is shown, there are some parts of the assignment I intend to work on going forward and I have also kept a record of some specific ones I would like to discuss
